Early Spring, 2010
Calcium-25® - helps crop yields, offers drought protection

NEWSLETTER

Volume 14, Number 1
Calcium-25® increases profits by increasing your volume per acre

Bio-Gard Agronomics foliar Calcium-25 products have not only continued to increase the marketable yields of crops **20 to 50% and more** for 28 years, but have been shown to provide **crop protection in the event of drought** later in the season! Calcium-25 increases plant growth early in the season, including root growth. The roots grow deeper, so they keep up with a lowering water table. Having to plant late due to rain shows **better than normal yields!** And Calcium-25 isn't just for organic farmers, since conventional farmers have also been using it since 1981!!

Applying Calcium-25 on wheat at early tillering in the spring (when side shoots start to emerge), causes a rapid increase in growth. As the plant grows, more tillers form. More tillers make more stalks which produce more heads - more grain from your wheat acreage. The result, higher yield, **MORE PROFIT!!** All at a reasonable price! A 44% increase in wheat yields can mean **doubling** your net profits!!
Wheat - spray at early tillering in spring - up to 44+% more grain!

Our customers ask "What could I have made using Calcium-25?" Good question! With **CORN** at \$4.00/bu, using Calcium-25 would be the same as getting \$5.32/bu with your acreage. **SOYBEANS** at \$10.00 - could be \$15.00/bu. **WHEAT** - \$5.50 - could be \$7.92/bu!! (These are the equivalent values of your acreage with a normal yield, compared to increases you get using Calcium-25). Just ask us for details!! **If you spray Calcium-25, and a day or so later, use other foliar products, such as kelp, fish, etc., you'll find both products work better!!!**

Increase BRXL up to 3-fold!!
 And, for for just a few dollars per acre!

Dr. Andrew J. Welebir, who developed Calcium-25 almost 3 decades ago, explains that "Calcium-25 only works when diluted with the proper amount of water. In solution, it forms a 'complex' with Ca²⁺ ions and certain plant waxes. This is quickly absorbed by the plant, causing a rapid stimulation of plant growth. This complex is why so little is needed. Calcium-25 should never be compared to other products, some of which need hundreds of pounds per acre to have a chance of being absorbed." **Temperature** is also important, since it determines absorption rate through the leaves. **Calcium-25 increases the plant's ability to use nutrients from the soil, sunlight, and water more efficiently.** And it works equally well with calcium-rich and calcium-deficient soils. No extra nutrients in the soil are needed to get increases in yield and profits with Calcium-25 - **affordably!!**

ALL plants experience a nutritional calcium deficiency at one point. It could be uptake from the soil, tissue deficiency, or translocation problems!

Calcium-25 does not affect pH!

Visit us on the web! www.Calcium25.com

Increase corn yields up to 33%+ - more rows!!

Soybeans? Up to 50% or more!!

Plants form more pods at the top!!!

Organic farmers, or conventional farmers - your best affordable way to increase your profits is by using Calcium-25 in your program!

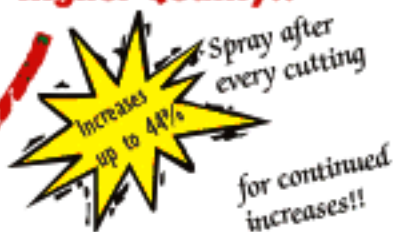

NOT just a calcium product!
Does NOT replace lime or other products - makes them work better!
IMPROVES yields, regardless of calcium levels - stimulates growth!

For Alfalfa, Hay, and Pasture....
You increase your yields by applying Calcium-25 after each cutting, or spraying in spring, summer, and fall on pasture & grasses.
Alfalfa also shows a higher ratio of foliage to stem growth!

Use on all your USDA Organic Crops

Higher Quality!!

Spray after every cutting

for continued increases!!

Corn increases are up to 33% using Calcium-25 - all for about the price of a basket!! (some say even higher yields)...
...and Bio-Diesel! Lower production costs!!!

Calcium-25 for Apples and Fruit Trees increases yields when it is applied early to midseason, and is 99.55% effective against bitter pit (this is according to university studies on file). Application up to 2 weeks before harvest improves storage. Furthermore, using Calcium-25, unlike any other calcium product, increases leaf number and size, and also tree size for a better yield the following year!!
Our product for use on vegetables and ornamentals increases yields up to 100% and more, and is also used for cotton, grapes, berries, peanuts, and nurseries!!

Calcium-25® can save your wheat!

Spraying wheat in spring can prevent lodging. So, instead of just a 44% increase, you gain what would have been lost at harvest due to lodging as well!

1-800-673-8502
afternoons & evenings, 7 days (If lines are busy, leave a message!!)

Yield increases up to:

Corn	15-33 %
Soybeans	50%
Wheat & Alfalfa	44%
Small Grains, Milo	20-40%
Vegetables	30-100%
Apples & Fruit Trees	18-28%
Cotton	18.4%
Peanuts	15.5%
Rice	20%
Pasture & Other Crops	20-50%
